

SYSTEMS SALES COMPANY

SHELF FILING EQUIPMENT

FEATURES

1. Recessed shelf to allow overhang of folders - speeds up removal of folders and replacing them.
2. Modular approach without sacrificing structural strength - basic components consist of 3 and 4 opening units. Six and seven opening units are a combination of these two basic units.
3. Shelves are welded in - not removable. Adds tremendous structural strength to units. Shelves cannot accidentally slip out even in moving.
4. 8" lift base - makes bottom opening usable even in active filing application.
Makes possible moving by such methods as fork lift without the waste time of emptying and reloading the fields.
5. Wire dividers support folders firmly yet allow maximum freedom for fanning folders.
6. Designed for maximum inside clear space per opening - the most filing inches - greatest height facilitates removal and replacing of folders.
Low cost per filing inch.
7. Doors cannot be removed without tools - cannot come off accidentally.
8. All welded unit and heavy gauges of steel thruout.
9. Each unit base closed back ends top and base.
10. Handles can never come out or break off - pressed into panel of door.
11. Door equalizers permanently attached.
12. Units with doors as dust free as drawer files.
13. Backs carefully finished - unmarred by any protruding bolts, lugs, etc. Makes attractive office partitions.
14. Decorator colors available - standard grey, light grey, olive green, light green, brown and tan. Special colors available when required.

Approved For Release 2002/09/26 : CIA-RDP76-00883R000100090070-2
